Dear Hiring Manager,

My name is Dillan Merchant and as a computer science major at the UCSD Jacobs School of Engineering, I am thrilled to have the opportunity to apply for the Systems Engineering summer internship at Qualcomm. I am eager to get my foot in the door and immerse myself in the technology industry by collaborating with professionals to support the growth of telecommunications products and services. Additionally, I believe that receiving support from Qualcomm's large community of managers would help with establishing a strong network of professionals as I continue to build my career throughout college.

Through my coursework, I have been able to establish a wide variety of knowledge in programming languages. I have developed my skills in Java, C++, C as well as website development languages such as HTML, JavaScript, and jQuery. In addition to my technical skillsets, I am also a hard worker and constantly eager to learn.

As a company specializing in telecommunications, diversity and connecting cultures is integral to the workplace. As a young individual that comes from different cultural backgrounds, I do believe I can bring a unique perspective in supporting Qualcomm's overall vision of inventing breakthrough technologies to help bridge the gaps in the way the world communicates.

I am looking very forward to hearing from you. Please feel free to contact me at dmerchan@ucsd.edu. Thank you for your time.

Sincerely,

Dillan Merchant
